Unless otherwise stated we describe trends in real terms, adjusting for the impact of inflation. Most of our data refers to the financial year 2014/15. Unless otherwise stated data refers to the whole of the UK.

The Almanac programme of work is made possible thanks to funding from the Economic and Social Research Council (ESRC).

The Almanac would not be possible without the contribution of the following people and organisations:

- The Economic and Social Research Council (ESRC), particularly Christopher Carlton
- Cazenove Capital Management, particularly Emily Petersen and Kate Rogers
- Third Sector Research Centre, University of Birmingham, particularly Professor John Mohan
- Centre for Data Digitisation and Analysis, Queen’s University Belfast, particularly Elaine Reid and Anthony Anderson
- Steers McGillan Eves, particularly Dot Thompson and Richard McGillan
- SCVO, particularly Ilse Mackinnon
- NICVA, particularly Andrea Thornbury and Rachel Shannon
- Office for National Statistics, particularly Heledd Jones and Gareth Powell
- Charities Aid Foundation
- Jennifer Crees, David Kane

The Almanac relies on the input and expertise of staff across NCVO, particularly Michael Birtwistle, Elizabeth Chamberlain, Ruth Driscoll, Greg Lamyman, Aidan Warner and Karl Wilding.
Cazenove Charities is delighted to sponsor the NCVO Almanac again this year. Now in its 16th edition, the Almanac provides an important reminder of the voluntary sector’s contribution to our economy and society.

As evidence of this positive impact, it is encouraging that the number of people working in the sector has increased by 27% since 2004 and that the voluntary sector’s contribution to UK GDP is now slightly higher than the GDP of Cyprus. We are also pleased to see that total net assets for the sector have continued to grow. In 2015 investment assets were valued at £82bn, close to the peak level seen in 2007, and investments now account for 65% of the sector’s total assets.

At Cazenove Charities we are the trusted partner of over 800 charitable organisations, helping our clients to navigate economic uncertainty and achieve their investment objectives, whatever their size and purpose.

Giles Neville
Head of Charities
Cazenove Capital Management

INTRODUCTION

This 16th edition of the UK Civil Society Almanac is published in uncertain times. The decision to leave the European Union, a new government and wider global changes will fundamentally alter our country’s economic, political and social landscape. In the run-up to the 2017 general election, lively debates are already underway about how to chart a course through this new landscape.

Change will represent opportunity for some and challenge for others; civil society will be the place where people seek advice and support, ideas and inspiration, discussion and voice. This Almanac illustrates the enormous potential of voluntary organisations and social action to help communities navigate this new landscape.

Voluntary organisations are helping to build a more social economy.

At the heart of UK civil society is the voluntary sector: 166,000 charities with a paid workforce of 853,000 people. The estimated value of the voluntary sector in the UK national accounts is £12.2bn, or 0.7% of the country’s GDP.

Charities are powered by volunteering.

More than one quarter of the population volunteer at least once a month, equal to more than 14 million people throughout the UK. While the increases in volunteering by young people we’ve seen in the last five years appear to have levelled off, people aged 16–25 still report the highest rate of volunteering of any age group.

The British public strongly support charities.

Income from individual members of the public remains the biggest source of income for the sector, amounting to £20.6bn, which also saw the biggest rise in any of the different types of income from the previous year. The overall income of the voluntary sector grew over the period covered here, continuing the increase seen in the previous year – in 2014/15 total income rose to £45.5bn.

Funding from government is mostly for delivering services.

While government income increased for the second year in a row, this growth was predominantly amongst the very largest organisations and remains dominated by contracts or fees, with grants making up only 19% of government income. The £115.3bn income that the voluntary sector receives from government continues to form a significant part of its incoming resources, but it only accounts for around 2% of total government spending.

Charities spend money mostly on delivering their mission.

Voluntary organisations spent £36.6bn on charitable activities (including grant making), representing 84% of the sector’s total expenditure. The balance was spent on the cost of generating funds and governance costs, ensuring both future sustainability and current accountability.

A key challenge: building an asset-based voluntary sector.

The voluntary sector holds assets, such as buildings, cash, and investments, worth £112.7bn, which it uses to generate further funds or to put towards its charitable aims. However, nearly 90% of total assets are held by just 3% of charities and the top 100 asset owners hold half of the sector’s assets alone. The vast majority of organisations have little reserves to speak of; a longstanding challenge.

Britain should be proud of its voluntary sector.

There is much to be proud of in this Almanac, from our country’s consistently high volunteering rates to the reach of our charities’ campaigns and services, and their impact on local communities. And the incredible support of the public highlighted in these statistics suggests that there is much that we should thank the public for too.

Some of the findings also act as a timely reminder to guard against complacency. Small charities and the communities with whom they work will likely continue to experience the effects of reductions in public expenditure, financial instability and recent inflation rises for the foreseeable future. Stable levels of charitable giving do not mean that we should assume the public no longer has concerns about some fundraising practices.

We know what works in enabling charities to do their work well: a blend of grant and contract funding that recognises the wider social value we offer, properly funded and professionally managed volunteering programmes, appropriate levels of regulation that inspire public confidence, including in our fundraising and campaigning work.

Whether as a volunteer, donor or commissioner, all of us have a role to play in ensuring the voluntary sector realises its potential to help the country navigate these uncertain times.

I hope that reading the Almanac inspires you to play your part.

Sir Stuart Etherington
Chief Executive, NCVO
Civil society has been defined in many ways:

- as the associational life that brings people together and allows civic values and skills to develop
- as a set of values associated with the ‘good society’ which aims for social, economic and political progress
- as a space where debate and deliberation allows the negotiation of the common interest.

In the Almanac, the term civil society is used to refer to all organisations that exist between government, individuals, and businesses.

The data for most civil society organisations is for the financial year 2013/14, except for the data on general charities, which is for 2014/15.

The estimated number of civil society organisations is 390,000 (excluding estimates for unincorporated organisations which range between 600,000 – 900,000).

Find out more about the different types of civil society organisations and look out for updated content at: data.ncvo.org.uk/a17civil-society

- **Trade unions** - 12,000
- **Benevolent societies** - 3,698
- **Credit unions** - 2,370
- **Political parties** - 913

Civil society organisations employ the equivalent of 7% of the total UK workforce.

The data for most civil society organisations is for the financial year 2013/14, except for the data on general charities, which is for 2014/15.
FAST FACTS

Voluntary organisations

- Number of voluntary organisations: 165,801
- Paid workforce (headcount): 853,000
- 65% female, 35% male

Voluntary sector finances

- Total income: £45.5bn
  - Income from individuals: £20.6bn
  - Income from government: £15.3bn
- Total spending: £43.3bn
  - Spending on charitable activities: £30.2bn
  - Spending on grants: £6.4bn
  - Spending on generating funds: £5.9bn
  - Spending on governance: £0.9bn
- Net assets: £112.7bn
- Contribution to the UK economy: £12.2bn

Volunteer at least once a month: 27%
Volunteer at least once a year: 41%
**Voluntary sector overview**

**SIZE AND SCOPE**

The voluntary sector is a vital part of the fabric of a strong society in the UK. It is very diverse, hosting a vast array of organisations ranging in size, aims and activity. Our analysis of the sector is based on our “general charities” definition (see methodology) which allows comparison of figures from year to year.

**By size**

The sector’s economy is dominated by larger charities. Organisations with an annual income of £1m or more account for 80% of the sector’s total income yet make up only 3% of the total number of organisations.

![Size and Scope](data.ncvo.org.uk/a17size-and-scope)

**Largest organisations**

The number of organisations with an income over £100m has been increasing since 2013/14.

![Number of super-major organisations, 2008/09 to 2014/15](data.ncvo.org.uk/a17size-and-scope)

**By activity**

Social service provision is the most common charitable activity, both in number of charities and spending.

![Number of organisations and spending (£bn) by activity type, 2014/15](data.ncvo.org.uk/a17size-and-scope)
Both the income and the spending of the voluntary sector increased in 2014/15, continuing the increases of the previous year.

Snapshot
The difference between income and spending (£2.2bn) does not necessarily imply that the sector has surplus income: capital expenditure on equipment or buildings is spread over the life of the asset, whilst total income includes items that are spent over multiple years.

Income and spending of the UK voluntary sector, 2014/15 (£bn)
Source: NCVO/TSRC, Charity Commission

Find out how much large charities contribute to the growth in income and spending at: data.ncvo.org.uk/a17finance-overview/
ECONOMIC VALUE

There is more than one way to quantify the contribution of the sector to the wider economy. The number of people employed and the gross added value (GVA) are two important indicators. The Almanac uses a method developed together with the ONS to estimate the GVA of the voluntary sector.

Added value

The contribution of the sector is similar to the GDP of Cyprus in 2015.

- **£12.2bn**
  - the GVA of the voluntary sector

Volunteers have been converted from USD to GBP.

Volunteering

The value of formal volunteering was estimated to be £22.6bn in 2015.

- **£22.6bn**
  - Source: ONS

Workforce

The voluntary sector employs 853,000 people. For comparison, the NHS, which is the single largest employer in the UK, employs twice as many people. Tesco employs about half as many people.

- **NHS 1,480,000**
- **Voluntary sector 853,000**
- **Tesco 476,000**

Source: Tesco, NHS, Labour Force Survey
Voluntary organisations are not distributed evenly throughout the UK. The location of charities in our analysis reflects where they are registered, not necessarily where their beneficiaries or main activity are located. Many national and international organisations are mapped to the local authority of their headquarters which are often based in London.

Nationwide

20% of voluntary organisations’ spending goes towards direct service provision.
Many people give their time, doing something that aims to benefit the environment or someone they are not closely related to. Volunteering rates in the UK remain high, with 27% of people over the age of 16 formally volunteering through a group, club or organisation at least once a month in 2015/16.

Over time
Rates of formal and informal volunteering are largely unchanged from previous years

By age
Rates of regular formal volunteering among young people have dropped slightly for the first time since 2010/11. However, in 2015/16 those aged 16–25 (32%) and 65–74 (31%) had the highest rates of monthly formal volunteering.

By organisation supported
Sports organisations, clubs and groups attract the most volunteers.

Want to know more about the profiles and motivations of volunteers? Or volunteering in your region? Find out at: data.ncvo.org.uk/a17/volunteer-overview

14.2 million people formally volunteered at least once a month in 2015/16.
Voluntary organisations employ 2.7% of the UK workforce. They offer a different employment environment in terms of job security and size of organisation.

Voluntary sector income by source, 2000/01 to 2014/15 (£bn, 2014/15 prices)
Source: NCVO/TSRC, Charity Commission

By income source
Most sources of income increased in 2014/15 except for income from the private sector which fell by 16% (£500m).

By income type
In 2014/15, earned income increased again, by £0.7bn to £24.8bn, and accounts for 54% of the total income. It took over voluntary income as the sector’s biggest type of income in 2003/04.
INCOME FROM INDIVIDUALS

Individuals are the largest source of income for the voluntary sector. This income comprises individual donations, legacies, as well as earned income (for example, income from charity shops and membership fees). In 2014/15, income from individuals amounted to £20.6bn, representing 45% of the sector’s income.

Income from individuals increased by £0.8bn, which is less than in 2013/14

Income from individuals, 2000/01 to 2014/15 (£bn, 2014/15 prices)

Donations provide the largest share of the income received from individuals

Income from individuals, 2014/15 (£bn, %)

By sub-sector

In 2014/15, Parent Teacher Associations and religious voluntary organisations received the highest proportion of their income from individuals

84% of the sector’s spending went towards achieving its charitable aims, through charitable activities or grant making.

Spending by type, 2014/2015 (£bn, %)

- Charitable activities: £30.2bn (70%)
- Governance: £0.9bn (2%)
- Grants: £6.4bn (15%)
- Cost of generating funds: £5.9bn (14%)

£0.7bn increase in spending on charitable activities and grant making.
GENERATING FUNDS

Voluntary organisations spend money to generate further income for their charitable activities. In 2014/15, voluntary organisations spent £5.9bn on generating funds.

By type of cost

Two-thirds of the costs of generating funds are spent on generating earned income.

Costs of generating funds, 2014/15 (Ebn, %)

- Cost of generating voluntary income: £1.5bn (25%)
- Cost of managing investments: £0.5bn (9%)
- Cost of generating earned income: £3.9bn (66%)

Over time

Since 2000/01, the costs of generating funds have increased both in cash terms and as a proportion of total spending.

Costs of generating funds, 2000/01 to 2014/15 (2014/15 prices)

By size

Larger organisations spend more on voluntary income, as a proportion of the total cost of generating funds, than smaller organisations.

Costs of generating funds by size of organisation, 2014/15 (%)

- Micro / small: 18% generating voluntary income, 70% generating earned income, 12% managing investments
- Medium: 23% generating voluntary income, 66% generating earned income, 11% managing investments
- Large: 18% generating voluntary income, 78% generating earned income, 7% managing investments
- Major: 23% generating voluntary income, 74% generating earned income, 3% managing investments
- Super-major: 36% generating voluntary income, 46% generating earned income, 18% managing investments

Fundraising ratio

Spending on generating funds continues to yield significant results, with each pound spent resulting in £4.16 being raised.

Ratio of cost of generating funds (excluding investment management) to income generated (earned and voluntary income from all sources)
Grant Making

The voluntary sector includes both organisations that receive grants from other voluntary organisations such as trusts and foundations, and grant-making foundations themselves. The grants given out by the voluntary sector are distributed to other voluntary organisations but also to individuals, universities and government bodies.

Over time

The voluntary sector spent a total of £6.4bn on grants in 2014/15

By sub-sector

International voluntary organisations receive the most grants from the voluntary sector

By type of recipient

Over half of the grants are made to other voluntary organisations

Top grant makers

Grant making continues to be dominated by a small group of organisations: the ten largest grant makers account for 26% of all grants made

Grants spent by top ten grant-makers, 2014/15 (£bn, %)

By sub-sector

Grants received by sub-sector, 2014/15 (£bn, %)

Over 80% of voluntary organisations hold assets which they commonly use to contribute towards their charitable activities or to help generate funds. Total net assets are made up of fixed and current assets minus liabilities.

**Overview**

The voluntary sector’s net assets are worth **£112.7bn** in 2014/15.

44% of micro/small organisations have no reserves
LIABILITIES AND LOANS

Liabilities represent the money that voluntary organisations owe to others, and can include loans, pensions, taxes owed, accruals, and grants committed in advance. They are classified as current/short-term (due within one year) or long-term (due in more than one year).

£17.7bn

Total liabilities of the voluntary sector in 2014/15

Type of liabilities

Half (52%) of the sector’s liabilities are long-term liabilities, including creditors, pension liabilities and provisions.

Make up of the voluntary sector’s liabilities, 2014/15 (Ebn, %)

Source: NCVO/TSRC, Charity Commission

By size

Larger organisations are more likely to have long-term liabilities.

Liabilities by income band, 2014/15 (%)

Source: NCVO/TSRC, Charity Commission

Loans

About one-fifth (19%) of the sector’s total liabilities relate to borrowing that voluntary organisations have undertaken.

Type of liabilities, 2014/15 (Ebn, %)

Excluding pension liabilities and micro organisations

Source: NCVO/TSRC, Charity Commission

Pensions

The sector’s pension deficit increased slightly in 2014/15, with the largest 3% of voluntary organisations carrying 86% of the sector’s pension liabilities.

Voluntary sector pension deficit, 2008/09 to 2014/15 (Ebn, 2014/15 prices)

Source: NCVO/TSRC, Charity Commission
INVESTMENTS

Investments are assets primarily in the form of equities, government securities, unit trusts and investment property. They provide an independent income source for voluntary organisations with assets to invest.

Over time
The sector’s investment assets continued to grow and almost reached pre-crisis levels from 2007/08

Value of voluntary sector investment assets, 2000/01 to 2014/15 (£bn, 2014/15 prices)

Investment income
In 2014/15, most of the sector’s investment income comes from returns on financial assets such as share dividends

Type of investment income, 2014/15 (£bn, %)

Fixed assets
The sector’s investment assets were collectively worth £85.1bn in 2014/15

Type of fixed assets, 2014/15 (£bn, %)

Investment costs
The relative costs of managing investments have plateaued when compared to the total return generated, which comprises both investment income and the value of the assets managed

Costs of managing investment, 2014/15

£3.3bn

The voluntary sector’s earned income from investments in 2014/15
Voluntary sector definition

As in previous Almanacs, the “general charities” definition is used to obtain estimates for the voluntary sector. The definition is based on common features of non-profit organisations and was originally constructed to also fit Office for National Statistics (ONS) national accounting purposes.

Included in the ‘general charities’ definition are registered charities that meet the following criteria:

- **formality** (institutionalised to some extent)
- **independence** (separate from the state)
- **non-profit distributing** (not returning profits generated to owners or directors)
- **self governance**
- **voluntarism** (involving some meaningful degree of voluntary participation)
- **and public benefit.**

Voluntary sector methodology

**Data source**

Financial data for a sample of just over 7,800 of these organisations was obtained for the Almanac 2017 by entering data from the charities’ annual accounts filed at the Charity Commission. This data entry process was carried out on behalf of NCVO (TSRC) and the Third Sector Research Centre by the Centre for Data Digitisation and Analysis at Queen’s University, Belfast.

**Sample design**

The sample design was originally based on a taking a random sample of general charities stratified by the size of organisation in terms of their annual income because this variable is both a key determinant of sampling error and a key variable for analysis. Different sampling fractions are applied to the different sizes/strata, the fractions increasing with size, until for ‘major’ organisations (with incomes of more than £10m) all organisations are sampled. Data is weighted at the analysis stage to take account of the different sampling fractions.

Data cleaning

Before use, the data is cleaned to remove significant errors and undergoes a series of checks to ensure validity. Organisations have a range of financial year ends, distributed throughout the year. To ensure consistency, all values were converted to April 2015 prices using the retail price index (RPI-X). The RPI-X was also used for trend data to convert actual values from previous years to April 2015 prices.

**UK totals**

Supplementary data from SCVO (Scottish Council for Voluntary Organisations) and NICVA (Northern Ireland Council for Voluntary Action) is used to produce estimates of the UK population. Due to rounding figures, some percentage totals may not sum to 100%.

**Analysis by sub-sector:** Sub-sector analysis is based on assigning charities to categories in the International Classification of Non-profit Organisations (ICNPO).

**Analysis by income band**

Within the Almanac, voluntary organisations are divided into six groups based on their income. Each group is named to make it easier to discuss the findings and place them in context. The sample data, however, is gathered in nine income bands to accommodate Charity Commission registration thresholds. These bands are aggregated to produce the six bands used in the Almanac. In 2016, we introduced a ‘Super-major’ group including charities with more than £100m annual income. This income band is warranted because there has been a noticeable increase in organisations with income of over £100m.

**Other data sources**

**Civil society**

This section draws on many different data sources, including Co-operatives UK, the Building Society Association, the Department for Education, and many more. The data for most civil society organisations is for the financial year 2013/14, except for the data on general charities, which is for 2014/15. To our knowledge, this represents the most up-to-date source of data covering such a broad range of organisations. Previous data suggests that the relative size of organisations will not have changed significantly.

**Charitable giving**

Charitable giving data is from the CAF UK Giving 2015, based on a survey of 4,160 individuals conducted by GfK NOP.

**Workforce**

Our employment figures are largely based on Labour Force Survey (LFS) data, which is the only national data source that attempts to classify individual employment by sector. The LFS surveys an estimated 60,000 private households every quarter. By pooling data for unique individuals from four quarters, it is possible to produce reliable estimates of the voluntary sector’s workforce. Weighting is used within the LFS to compensate for non-response rates in certain groups and produce population estimates.

To identify the sector a respondent is employed in, a two-stage self-classification process is used. Respondents are first asked whether they work for a ‘private firm, business or a limited company’ or ‘some other kind of organisation’. Those respondents who choose the second option are then asked, ‘what kind of non-private organisation is it?’. They are then presented with a range of options including ‘charity’, voluntary organisation or trust. For the purposes of the analysis for the Almanac, responses to these questions were recoded into a sector variable and defined as ‘private’, ‘public’ or ‘voluntary’.

**Volunteering**

This data draws on the Citizenship Survey (2001–2010/11) and Community Life Survey (2012/13–present), the best sources of data on rates of volunteering in England. There was a gap in the data when there was no survey in 2011/12, during the transition between the two surveys. The Community Life survey is commissioned annually by the Cabinet Office and carried out by TNS BMRB, and is designed to be representative of adults aged 16 and over in England. The measures used here were common to both surveys. The data collection methods were also broadly similar.

The survey describes both ‘formal volunteering’, which takes place through a group, club or organisation, and ‘informal volunteering’, which takes place independently of such structures. Data is drawn from the most recent survey unless otherwise stated, which reports on volunteering during the 2015/16 year, and includes the appropriate weighting.
